

General planning.

Avenues to explore in data.

- Plot growth rate using data from Biology by the numbers
- Things that might be of interest
- growth rate versus volume
- Protein density
- Can I extract the rRNA/protein ratio from Scott 2011 and use this in analysis? I.e. look at what proteins seem to be changing with growth rate?

Quantitative predictions:

1. Essential proteome -> what fraction, other questions?

Summary of what others have done already.
