

(A)

translation-limited growth rate

$$\lambda_{\text{translation-limited}} = \frac{r_t \times R}{N_{\text{aa}}}$$

R is related to protein mass by,

$$\Phi_R = \frac{m_R}{m_{\text{protein}}}, \quad R \approx m_R \times \frac{1 \text{ ribosome}}{L_R \times 110 \text{ Da}} \times \frac{6 \times 10^{11} \text{ Da}}{1 \text{ pg}}$$

N_{aa} is related to protein mass by,

$$N_{\text{aa}} \approx m_{\text{protein}} \times \frac{1 \text{ aa}}{110 \text{ Da}} \times \frac{6 \times 10^{11} \text{ Da}}{1 \text{ pg}}$$

$$\lambda_{\text{translation-limited}} \approx \frac{r_t}{L_R} \Phi_R$$

$$r_t \approx 17 \text{ aa/s}$$

$$L_R \approx 7,500 \text{ aa}$$

- Valgepea et al. 2013

(B)

maximum growth rate is set by ribosomes

(C)

ribosome synthesis will become rRNA limited at fast growth
