

(A)

translation-limited growth rate

— maximum r-protein synthesis rate

— maximum growth rate λ

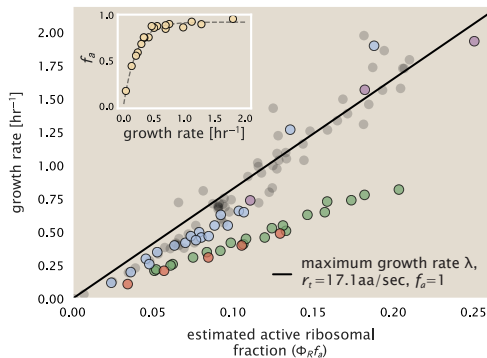

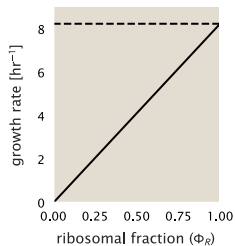

$$\lambda = \frac{R \times r_t \times f_a}{N_{\text{pep}}}$$

$$\approx \frac{r_t}{L_R} \times \Phi_R \times f_a$$

$$r_t = 17 \text{ aa/s}$$

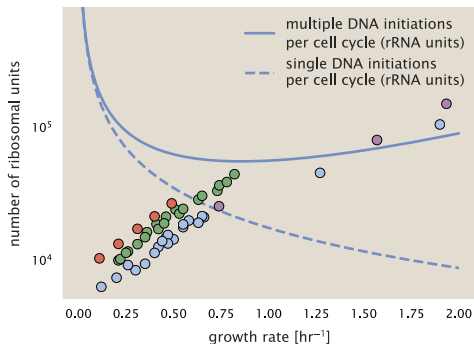

$$L_R = 7,459 \text{ aa}$$

$$f_a = 1$$

(B)

limitations on rRNA synthesis
