

ATP synthesis

$$N_{\text{proteins}} \approx 3 \times 10^6 \quad \text{BNID: 115702}$$

number of proteins per cell

$$N_{\text{amino acids}}^{(\text{protein})} \approx 300 \text{ amino acids / protein} \quad \text{BNID: 100017}$$

average number of amino acids per protein

$$N_{\text{peptide bond}}^{(\text{amino acid})} \approx 1$$

$$N_{\text{peptide bond}}^{(\text{cell})} \approx \frac{N_{\text{proteins}} \times N_{\text{amino acids}}^{(\text{protein})}}{N_{\text{peptide bond}}^{(\text{amino acid})}} \approx \frac{3 \times 10^6 \frac{\text{proteins}}{\text{cell}} \times 300 \frac{\text{amino acids}}{\text{protein}}}{1 \frac{\text{peptide bond}}{\text{amino acid}}} \approx 1 \times 10^9 \text{ peptide bonds}$$

number of peptide bonds required to double proteins

$$N_{\text{ATP}}^{(\text{peptide bond})} \approx 4 \text{ ATP / peptide bond} \quad \text{BNID: 101442}$$

ATP to generate peptide bond

$$r_{\text{ATP synthesis}} \approx \frac{300 \text{ ATP / sec}}{\text{synthase}} \quad \text{BNID: 114701}$$

ATP synthesis rate

$$N_{\text{ATP synthases}} \approx \frac{N_{\text{ATP}}^{(\text{peptide bond})} \times N_{\text{peptide bond}}^{(\text{cell})}}{r_{\text{ATP synthesis}} \times t_{\text{division}}} \approx \frac{4 \frac{\text{ATP}}{\text{peptide bond}} \times 10^9 \frac{\text{peptide bonds}}{\text{cell}}}{300 \frac{\text{ATP}}{\text{sec} \times \text{synthase}} \times 5000 \frac{\text{sec}}{\text{cell}}} \approx 3000 \text{ ATP synthases}$$

number of ATP synthase complexes
